

How To Apply Your 3rd Brake Light Decal GOLF MK4

For optimum results, apply decal at room temperature (55 to 75 degrees) or above

For optimum performance please follow the steps below

THIS DECAL IS TO BE FITTED TO THE LIGHT LENS - NOT THE WINDSCREEN

PLEASE NOTE:

WE WILL NOT BE HELD RESPONSIBLE FOR ANYONE THAT DOES NOT ADHERE TO THE INSTRUCTIONS AS LAID OUT OR IF THEY HAVE BEEN DAMAGED WHILST FITTING

Fold over excess vinyl over top and bottom of light

Clean the surface thoroughly with a lint-free cloth

For best results, the surface must be clean and free of all waxes and residue

Slowly pull the backing (heavier gauge paper) off from the decal

If part of the decal moves out of its original position, you can put it back into place by pushing the backing down and move the decal back to its original position

Ensure the decal is lined up straight and central before attaching

Rub along the decal with your finger gently smoothing it down

Remove the masking tape, peeling from the corner and pulling back really slowly
