

How To Apply Your 3rd Brake Light Decal Universal

For optimum results, apply decal at room temperature (55 to 75 degrees) or above

3rd BRAKE LIGHT DECAL

PLEASE NOTE:

WE WILL NOT BE HELD RESPONSIBLE FOR ANYONE THAT DOES NOT ADHERE TO THE INSTRUCTIONS AS LAID OUT OR IF THEY HAVE BEEN DAMAGED WHILST FITTING

If fitting to the windscreen, align centre of text with centre of brake light and apply as per fitting instructions supplied

If fitting to the brake light lens, measure the height and width of the brake light lens and draw the lines on the top of the decal in pencil

Once happy with the size of your decal cut along the lines with a craft knife and ruler or scissors then apply the decal as per fitting instructions below

Clean the surface thoroughly with a lint-free cloth

For best results, the surface must be clean and free of all waxes and residue

Slowly pull the backing (heavier gauge paper) off from the decal

If part of the decal moves out of its original position, you can put it back into place by pushing the backing down and move the decal back to its original position

Ensure the decal is lined up straight and central before attaching

Rub along the decal with your finger gently smoothing it down

Remove the masking tape, peeling from the corner and pulling back really slowly
